I'm a Senior Product Designer with 14+ years of experience, currently leading interaction design at GE HealthCare. I design for complexity: healthcare systems, industrial tools, e-commerce. I believe the best interfaces are the ones that get out of the way.

EXPERIENCE

Sr. IxD & UX Lead @ GE HealthCare

2021 – Present · Chicago, IL

Lead interaction design for clinical and imaging software used in hospitals worldwide. Partner with our research and usability teams to explore and validate design directions, then carry them through workflow mapping, detailed interaction specs, high-fidelity prototypes, and design system contributions. Work closely with product, clinical, and engineering leads to simplify complex, high-stakes workflows where clarity directly affects patient care, and mentor designers across teams on interaction craft and process.

UI/UX Engineer @ Mitsubishi EDM/Laser

2018 – 2021 · MC Machinery Systems, Inc.

Translated designs into usable, actionable front-end solutions across desktop and mobile, creating concepts, wireframes, mockups, and user journeys that led to intuitive experiences. Built new features and functionality from end-user research and behavior, ran rapid design and testing cycles, and clearly communicated research and design direction to the team and upper management. Took on growing back-end and data responsibilities to deliver whole solutions end to end.

UI/UX Designer @ Mitsubishi EDM/Laser

2015 – 2018 · MC Machinery Systems, Inc.

Designer and front-end developer for remote360®, a remote monitoring web app bringing transparency to machining processes; brought on to build the solution from the ground up. Gathered and evaluated requirements with product managers and end-users, illustrated ideas through wireframes, process flows, and sitemaps, and designed the dashboard UI, navigation, and interactive prototypes. Presented drafts to internal teams and leadership, identified and troubleshoot UX problems such as responsiveness, and iterated on user feedback while assisting back-end data work.

Web Designer @ The Tire Rack

2012 – 2015

Designed and produced web projects with a focus on visual design, navigation, usability, and brand identity. Worked closely with the online marketing manager and department leads to solidify design direction and translate ecommerce and business goals into compelling visual solutions, spanning online advertising, mobile and social media platforms, and email marketing. Maintained design standards, interfaced with web developers, and researched and recommended UI trends, technologies, and processes for site development.

OUTSIDE THE OFFICE

Co-Founder @ Homeground

2025 – Present

A Midwest-themed seasonal subscription box pairing curated kids' books with small-batch, Midwest-roasted coffee. Co-founded with my partner Sara; I lead brand and product experience from storefront and visual identity to the unboxing moment.

EDUCATION

Andrews University

Bachelor of Fine Arts, Web Design

2007 – 2012

Kingsway College

High School Diploma

2003 – 2007
